

Dear Colleagues,

It is our great pleasure to invite you to this glaucoma focused, virtual Advancing Ophthalmology educational event on 18th June, '**Limitations of current glaucoma management: What does the future hold?**'.

Advancing Ophthalmology is a global medical educational initiative that, in partnership with the ophthalmology community, aims to drive scientific exchange and elevate the standard of care to improve ocular health.

We have a fantastic interactive programme lined up for you, with lectures from our international faculty, panel discussions and plenty of opportunities to put your questions to the experts.

Along with the meeting Chair, Prof. Herbert Reitsamer, we will be joined by world-renowned glaucoma specialists as we explore the unmet needs and opportunities to advance care for patients with glaucoma. The session will start with Prof. Anders Heijl discussing key considerations when setting meaningful target IOP goals for your patients, followed by Dr Anthony Khawaja who will give insights into the use of SLT in the real world. Next, Dr Andrew Tatham will highlight the importance of 24-hour IOP control, and Dr Miriam Kolko will brief us on future sustained-release products. We will discuss the role of earlier surgical interventions with Prof. Herbert Reitsamer and finally, we will review the common filtration bleb challenges and their management with Prof. Ingeborg Stalmans.

Please take the time to review the agenda [here](#) and [register](#) on the Advancing Ophthalmology platform today!

We are confident this event will equip you with practical insights and advice that will make a real difference to your practice and your patients.

We look forward to seeing you in June!

Kind regards,
Global Medical Affairs – Eye Care
