NEW

ZEISS VISUMAX 800

The new evolution femtosecond laser, VISUMAX® 800 from ZEISS opens new opportunities to achieve excellent refractive outcomes.

- Perform the lenticule creation in less than 10 seconds¹
- Enhance control thanks to intelligent computer-assisted cyclotorsion and centration alignment.
- Connect to Refractive Workplace® from ZEISS² to streamline your digital workflow.

True measurements, fewer assumptions

ANTERION® is the definitive toolbox for refractive cataract surgery planning. It provides rich data from all refractive surfaces and integrates the measurements needed for predictable IOL power calculations.

Visualize your measurements with optimized swept-source OCT images. Benefit from advanced methods that make the difference in challenging eyes.

SmartSight: level up your vision.

Thoroughly minimally invasive.

SCHWIND SmartSight®

- Safety through intelligent eye tracking
- Cyclotorsion compensation for effective treatment
- Improved eye comfort through curved patient interface geometry
- Tissue-saving through optimised lenticular geometry
- High flexibility through compact design

SCHWIND SmartSight® is an up-to-date minimally invasive femtosecond laser procedure without a flap. The advancement of lenticule extraction features intelligent eye tracking with pupil recognition and cyclotorsion compensation. This enables very easy and precise centring. The curved patient interface reduces pressure on the eye during positioning, for more patient comfort. The compact design and user-friendly operation provide high flexibility and allow an efficient corneal surgery workflow.

The background of the entire page is an abstract pattern of numerous circles in various shades of red and pink. The circles vary in size, with some being very small and others being large enough to overlap. They are scattered across the page, creating a dense, textured effect. The colors range from a deep, dark red to a very light, almost white pink.
